We simplify construction

At Lindab we are driven by a strong desire to continuously generate improvements and to simplify construction. We do that by developing products and systems that are easy to use and energy efficient, together with industry-leading knowledge, support, logistics and efficient availability. We want to simplify everything – from designing, ordering, delivery, goal achievement and installation to the entire way of doing business with us. By simplifying in every stage of the construction process, we also contribute to energy-efficiency.

A good thinking company

Good thinking is a deeply rooted philosophy that guides us in everything we do. We firmly believe that good thinking makes good solutions to the challenges we all face. Taking responsibility for what we do and how we do things is therefore important to us. Because good thinking is not only about making life easier and more comfortable for our customers and end users. It is also a matter of thinking in a global perspective, all the time. Knowing that we at Lindab are helping to make the world a better place.

Premium class plug&play air handling units

The upgraded Lindab compact air handling units range was developed to ensure perfect indoor climate for different types of smaller non-residential premises, such as offices, restaurants, hotels and shops.

Impressive technical features paired with ultimate user experience

The new CompAir range boasts significantly improved housing characteristics, premium-class components, more flexible installation in limited spaces and an optimized price-performance ratio. A new cloud-based control

system allows simple interconnection with other HVAC elements and user friendly setting of the desired parameters via PC or smartphone.

Advanced selection software

An advanced software selection tool AirCalc++, available in multiple languages, makes it easy to determine the optimum unit for individual premises.

Besides calculations, the program also allows to create drawings, which can be exported to AutoCad, detailed project descriptions and a thermodynamic process Mollier h x diagram.

Convincing technical performance and top class components

Housing	BASIC	PLUS
Thermal transmittance	T2	T2
Thermal bridge factor	TB3	TB2
Casing strength	D1	D1
Air leakage	L1	L1
Panel thickness	50 mm	50 mm

One of the most distinctive features of the new compact AHU range is a high quality housing with 50 mm panels, insulated with mineral wool, and convincing technical characteristics. For higher resistance the panels are powder-coated as standard. Optionally they are also available in Aluzinc.

The implementation of EC fans results in higher energy efficiency, while low air velocities lead to better performance.

Another important competitive advantage are the multiple coils options, including electrical pre-heaters, electrical or water heaters, water cooling coils or DX coils.

Certified quality and impressive energy efficiency

CompAir air handling units are Eurovent certified within the existing Klimair2 range and fulfill the requirements of ErP 2016/ErP 2018 according Ecodesign Directive (2009/125/EC).

Due to a high heat recuperation level of up to 90% (Compair CF) / up to 85% (CompAir RW), the energy consumption for the ventilation of buildings is minimized.

User friendly control system

Our plug&play air handling units are equipped with an advanced integrated control system. A new cloud based platform allows flawless communication to achieve the best system performance.

Integration on automation level without any need for Scada-based support.

Immense flexibility regarding user functions and price level due 3 different user levels: Basic, Standard and Advanced All units are fully wired and pre-tested at the factory.

Immense flexibility in limited spaces

The new compact range features three different types of connections placement, so that the units also can be fitted in very limited spaces:

- Horizontal connections (H) 4 side connections.
- Half-vertical connections (HV) 2 side and 2 top connections.
- Vertical connections (V) 4 top connections.

Connections can be circular (with Lindab Safe double rubber seal) or rectangular (fix or flexible).

For even greater flexibility, all basic units are available in monoblock or splitted version.

Large accessory range

With our customers' needs in mind, we have decided to offer a broad range of standard accessories, such as:

- Valves
- Drive valves
- Roofs
- Hoods
- **Duct silencers**
- **Duct coils**
- Feet
- Anti-vibration pads

CompAir CF

with counterflow heat exchanger

Description

CompAir CF is a family of air handling units in seven sizes, covering air flow volumes from 350 up to 10 700 m³/h, and boasting up to 90% heat recovery of the exhaust air. As an additional option heating and/or cooling can be included. The basic unit is available as monoblock or splitted version, with various connection options and is designed for both indoor and outdoor installation. The integrated control system is available in three versions: Basic, Standard and Advanced.

Basic configuration:

- Highly efficient counterflow heat exchanger.
- · Inlet and outlet fans with EC motors.
- Panel or bag filter F7 on inlet and M5 or F7 on outlet side.

Housing:

- Basic housing: panels TopAir: T2, TB3 class.
- Plus housing: panels TopAir Plus; T2, TB2 class.
- Exterior of the panels coated in RAL 7035, option:
 Aluzinc.

Optional sections:

- Water heater or electrical heater.
- Water cooler or DX cooler.
- Preheater.
- Duct heater and cooler.

Accessories:

- CO, or pressure sensors.
- · Fire by-pass.
- · Smoke detector.
- Regulation of external humidifier.
- Roofs, inlet and outlet hoods for outdoor version.
- Circular or rectangular duct connections.
- Support feet.
- Syphons.

Recupera- tion type	Designation	Max. capacity [m³/h]	SFP [w/m³/s] (Δpext=200Pa)*	Conne	ction [mm]	Connection placement **	Heat recovery***

\Diamond	CF 10000	10700	802	Ø 800	1915 x 610	H, HV	84,2%

 $^{^{\}star}$ SFP value for supply fan at $\rm V_{nom}$ and basic unit configuration.

^{**} \mathbf{H} = horizontal (4 side connections), \mathbf{HV} = half vertical (2 top + 2 side connections), \mathbf{V} = vertical (4 top connections).

^{***} Heat recovery is calculated according to EN 308 standard. In real conditions efficiencies up to 90% can be reached.

CompAir CF

Connection placement versions - options to be selected in AirCalc++

CompAir CF with 4 side connections (H)* - 7 sizes up to 10 700 m³/h

CompAir CF with 2 side and 2 top connections (HV)* -7 sizes up to 10 700 m³/h

CompAir CF with 4 top connections (V) - 3 sizes up to 3 300 m³/h

^{*} the stated connection placement options are valid for both monoblock and splitted version

CompAir CF (H)

Units with horizontal connections (H)

CompAir CF (H) monoblock, fresh air intake on upper side

CompAir CF (H) splitted, fresh air intake on lower side

CompAir CF (H) splitted version, with additional sections

All configurations are available:

- With fresh air intake on lower or upper side.
- In splitted or monoblock version.
- With round connections (fix) or rectangular connections (fix or flexible).

	FC24	flexible canvas on rectangular connections 2,4		
	x	without flexible canvas		
Dampers	DA1(1)3(1)	dampers on connections 1,3 - actuator on/off		
	DA1(2)3(2)	dampers on connections 1,3 - spring actuator		
	DA1(1)	damper on connection 1 - actuator on/off		
	DA1(2)	damper on connection 1 - spring actuator		
	x	without dampers		
Automation and control accessories				
Automation type	В	basic automation		
	S	standard automation		
	Α	advanced automation		
	X	without automation		
Pressure measuring	x	without magnehelic		
	1	with magnehelic (2 pcs.)		
Fire by-pass	x	without fire by-pass		
	FB	fire by-pass		
	FB1	fire by-pass + damper		
Smoke detector	x	without smoke detector		
	SD	smoke detector		
CO ₂ sensors	x	without CO ₂ sensor		
	CO2	CO ₂ sensor		
Pressure sensors	x	without pressure sensor		
	DV	constant airflow regulation		
	DP	constant duct pressure regulation		
	DB	constant duct pressure, airflow measurement		
Humidifier regulation	x	without duct humidifier regulation		
	DH	duct humidifier regulation		

Components & Accessories

Control System

Advanced cloud-based controls

- The integrated control system is available in three versions: Basic, Standard and Advanced, with different functions (see table below) and price levels.
- The user friendly interface is designed in multiple languages.

BASIC controls:

 Compact preprogrammed controller with internal display allows easy controlling of basic functions and represents a reliable low-price solution for less demanding applications.

STANDARD controls:

 This version offers a large range of control functions, which are accessible via a stand-alone display and configuration unit.

ADVANCED controls:

- The modern swipe and touch display is designed to make the user interface simpler and more intuitive, with easy browsing between the screens.
- The air handling unit is also accessible via the cloud application "Lindab Connect".

Smartphone/Cloud connectivity			•

Note: (\bullet) = optional feature, \bullet = default feature

BMS connectivity - options

- TPC/IP Modbus communication.
- TPC/IP BACnet communication.
- TCP/IP port can be used to connect the controller to the cloud, or optionally, connect to the controller via remote IP address.

Smartphone connectivity

 The Smartphone application enables access to the controller with a web server from any mobile phone, tablet or computer with a web browser. You can control and supervise building systems, read and follow up values, change settings, manage alarms, etc. – at all times, regardless of your location.

Cloud connectivity

- For users, who demand a complete control of the buildings indoor climate portfolio, our cloud application is the tool of choice. The web-based platform can always be accessed by various users, regardless of their current location.
- Once the controller has been configured, a dynamic flow window is automatically created and current configuration values are shown in real time.

Logging

 Log values can be stored and read for up to one year in the cloud app. The controller sends log values to the cloud every ten minutes and can up to a month be viewed graphically at all times. It is also possible to view data from previous months or to save the complete log as an Excel file.

Connection

 In order to access the cloud app via a network, a network cable connected to the Internet is required. A 3G modem can also be used to access the cloud app.

Good Thinking

At Lindab we simplify construction for our customers. We do that by designing easy-to-use products and solutions, as well as offering efficient availability and logistics. We are also working on ways to reduce our impact on our environment and climate. We do that by developing methods to produce our solutions using a minimum of energy and natural resources, and by reducing negative effects on the environment. We use steel in our products. It's one of few materials that can be recycled an infinite number of times without losing any of its properties. That means less carbon emissions in nature and less energy wasted.

We simplify construction
